THE UNFCCC COUNTRIES SHOULD REVIEW THEIR EFFORTS TO RISE BY 2020 TO LIMIT GLOBAL

GLOBAL WARMING TO 2 DEGREES

Paris, Washington DC, 03.11.2015, 13:21 Time

USPA NEWS - The UNFCCC report presented today is consistent with estimates of the thermometer commitments and funding of the Nicolas Hulot Foundation. - The UNFCCC estimated emissions in 2030 to 56.7 GteCO2 (recall numbers FNH: GteCO2 of 56-60, depending on assumptions of economic growth and development.

Some have argued that this looks remarkably like a C&C logo. In 2003 the UNFCCC Executive said the objective of the UNFCCC, "inevitably requires "Contraction and Convergence". Perhaps that's why it looks like this.

- The UNFCCC estimated emissions in 2030 to 56.7 GteCO2 (recall numbers FNH: GteCO2 of 56-60, depending on assumptions of economic growth and development of renewable in China and India);
- Lower emissions per person would be 5% in 2030 compared to 2010 (recall FNH figures: between stability and 6%);
- The gap remains very large (up to 15 GteCO2 too in 2030) with economically effective scenarios to limit warming to 2 degrees;
- Note that it is a pity that the report does not address the UNFCCC financial costings of aid requested by developing countries and does not give details of the evaluations country by country shows.

With 196 Parties, the United Nations Framework Convention on Climate Change (UNFCCC) has near universal membership and is the parent treaty of the 1997 Kyoto Protocol. The Kyoto Protocol has been ratified by 192 of the UNFCCC Parties.

The ultimate objective of both treaties is to stabilize greenhouse gas concentrations in the atmosphere at a level that will prevent dangerous human interference with the climate system.-----

Stories on the Newsroom are written by UNFCCC staff. The publisher of the website is Nick Nuttall, Spokesperson and Coordinator Communications and Outreach.-----
